Same task and approved current Git repository
A: Codex pass-through
Original task; preparation off
M: bounded source selection
Lexical + static syntax evidence
A
Selected complete current files
or source-selection abstention
Separately authorized verifier
Public commands + baseline counts
Pinned receipt outside source
Optional verified-command card
May remain active after source abstention
Commands precede source when supplied
Source / receipt / prompt revalidation
Exact handoff to installed Codex
Same native Codex CLI and external coding model
